The following immunizations are required by Freeport-McMoRan for personnel traveling and/or residing in the DRC. Immunizations must be received at least ten (10) days prior to arrival and you must carry your International Certificate of Immunization (yellow card) in your passport at all times when traveling to and from the DRC. Failure to comply is a violation of DRC laws and regulation and will result in being denied entry into the DRC.

1. Yellow Fever. (Required for all travel to the DRC)
2. Twinrix (Hepatitis A/B combined). The Twinrix vaccine protects against Hepatitis A and Hepatitis B. It is a series of vaccines consisting of 3 doses spaced out over approximately 6 months. The first dose is given on day 0. The second dose is given 1 month after the first dose, and the third dose is given 6 months after the first dose. (Alternatively, an accelerated schedule can be used at days 0, 7 and 21-30 with a 12 month booster)
3. eIPV (inactivated polio vaccine booster for those vaccinated in childhood against polio who have never received a booster as an adult).
4. Oral Typhoid (parenteral also an option for those who have difficulty swallowing capsules, are non-compliant or have less than 8 days before travel commences).
5. Meningococcal vaccine. (Menomune for ages > 2 yrs. (Menactra for ages 11-55).
6. TdaP (tetanus, diphtheria, pertussis) booster, if >10 yrs. since last booster.
7. Influenza, when available.

The following vaccination should strongly be considered by personnel who travel long-term or reside, especially children in the DRC:

1. Pre-exposure Rabies.

The following medications should be brought with you during your travel to the DRC:

1. Malaria Chemoprophylaxis (This information does not take the place of talking to your prescriber about Lariam and malaria prevention)
   - Lariam (Mefloquine Hydrochloride) 250 mg, 4 tablets
     - Begin taking 1 Lariam tablet 1 week before traveling to a malaria area. This first dose should be taken at least 3 days after you have received your travel vaccines.
     - Continue taking 1 Lariam tablet once a week, on the same day each week, while in a malaria area and for 4 weeks after returning home from a malaria area.
     - Additional supply of Lariam is available at the ISOS clinic located at the TFM mine site for your time in a malaria area and for your return home supply.
     - You should avoid taking Lariam if you are pregnant, nursing, allergic to quinine or chloroquine, have/had history of depression, have/had severe anxiety or seizure disorders.
     - You should stop taking Lariam if you experience nausea, vomiting or abnormal dreams.

If Lariam is not acceptable, you may take a different medicine to prevent malaria such as:
   - Doxycycline (currently short U.S. supplies - readily available from South Africa suppliers), or
   - Malarone
     - Employees traveling from North America locations for permanent DRC assignments and not wishing to take Lariam should initially take Malarone until they are established at their DRC work location. After which time, the ISOS medical staff will assist in converting to Doxycycline.
     - For DRC short term travel Malarone is recommended

2. Imodium A-D. Available at your local pharmacy.
3. DEET insect repellant.

The following malaria medication and medical supply should be taken with you upon your departure from the DRC. Both are available at the ISOS Clinic located at the TFM mine site.

1. Return trip malaria medication supply
2. Malaria Survival Rescue Kit

- Mosquito bed nets are available and set up at the TFM mine site.
- All immunizations, except Yellow Fever, are optional for travel less than 48 hours to the DRC.
- Immunization boosters are the responsibility of the employee to receive at the recommended schedule.
